

SteelMac Contracted to Refurbish HMS Enterprise Fresh Water Tanks

11th - 19th January 2010

Continuing our partnership with Serco (Gib) SteelMac Ltd was recently contracted to clean, drain and refurbish four freshwater tanks on HMS Enterprise. The 'Enterprise' is a multi-role Survey Vessel (SVHO) of the Royal Navy currently in the area before travelling through the Mediterranean to begin operations east of Suez. SteelMac was tasked with draining the tanks as well as cleaning and de-gassing them according to strict regulations and standards.

The SteelMac crew comprised of a foreman and a three man crew all of which have been specially trained in confined spaces operations. Using our ROBOJET pressure washer and Wilden type pumps the operation has been carried out successfully. The tanks have also been refurbished to cosmetic regulations using specialised epoxy paint.

(above left-clockwise) The SteelMac crew use breathing apparatus, waste water is pumped out onto cubitainers.

(above) The SteelMac operation runs smoothly as the waste water is transported away from the HMS Enterprise
