

SteelMac Crew Completes Upper Rock Fossway Repair

11th - 14th January 2010

The latest project undertaken on behalf of Serco (Gib) was the repair of the Fire Main Line located off the Fossway in the Upper Rock. This line feeds into the ammunition stores and is inaccessible without the proper equipment, proved no challenge for our specially trained crew. Using our KATO City Crane, the SteelMac crew were able to repair the line as well as repair the brick work supports.

The team consisted of foreman J C Robba and a three man crew including crane operator, welder and labourer. Wearing harnesses, the task was undertaken quickly to minimise disruption, taking only four days the line was cut, replaced and welded in place. Additional work was also carried out on the supports, repairing the brick-work and improving the stability. The versatility of the KATO crane was invaluable in allowing both men and materials to be delivered onto difficult and inclined terrain.
